

Navigating Flight Booking Analytics

Turning raw aviation data into
actionable business strategy
using Power BI.

The Pre-Flight Briefing: Our Objective

Raw Booking Data

The Power BI Transformation

Imagine trying to fly a plane
by looking at a thousand
random numbers.

We built a screen that does the math for you, so the pilot just has to steer.

Actionable Business Strategy

The Cockpit View: A Macro Look at the Metrics

Airline & Passenger Profiling

Executive KPI Telemetry

The Asset

Financial & Geographic Breakdown

Reading the Instruments: Executive KPIs

Translation Matrix

Technical Data	In Plain English
Total Bookings: 250	The total number of tickets sold in this dataset.
Average Ticket Price: ₹2.58K	The baseline pricing strategy. Selling more tickets at this price is the key to steady revenue.
Average Flight Duration: 11.04 Hours	Our typical customer is flying long-haul.
Total Flight Duration: 2.76K Hours	The combined time our passengers spent in the air.

Understanding Flight Variability

Flight Duration Standard Deviation: 6.38

Flight Duration Variance: 40.72

super short hop

globe-trotting

In Plain English: Standard Deviation and Variance sound scary, but they just tell us how spread out our flight times are. If every flight was exactly 11 hours, these numbers would be zero. Because some flights are quick 1-hour hops and others are 20-hour mega-journeys, these numbers are higher. It helps us know what to expect!

The Wallet: Analyzing Passenger Payment Preferences

Action Flowchart

The Data

Cash and Credit Cards dominate. UPI has the lowest booking share.

The Insight

Low digital adoption among our current customer base.

The Strategy

Introduce targeted cashback or discounts specifically for UPI transactions to drive digital payment adoption.

The Fleet: Airline Performance & Travel Times

Long-Haul Leaders

Certain airlines consistently log longer average flight durations.

Agile Competitors

Airlines combining competitive pricing with shorter travel times attract higher customer demand.

Strategic Takeaway: Use this operational data to optimize airline partnerships and refine pricing strategies based on route speed.

Air Traffic: City-Wise Ticket Pricing Strategies

The Manifest: Passengers & Booking Patterns

Demographics (Passenger Age Analysis)

Demographics (Passenger Age Analysis)

Flight duration preferences vary significantly across age brackets.

Action: Personalize marketing campaigns for specific customer segments.

Operations (Booking Distribution)

Operations (Booking Distribution)

Recognizable booking patterns emerge over time.

Action: Use trends to forecast demand, optimize seat allocation, and manage staffing.

The Revenue Engine: Synthesizing the Strategy

Data in isolation is just numbers. By linking pricing, promotions, and personalization, we create a self-sustaining revenue engine.

Smooth Landing: Measurable Business Impact

✓ Improved visibility into macro booking trends.

✓ Identified customer payment preferences and gaps.

✓ Supported data-backed pricing strategy decisions.

✓ Enabled rapid, data-driven revenue analysis.

✓ Improved operational and staff planning capabilities.

✓ Assisted executive management with real-time KPI monitoring.

✓ Enhanced decision-making through an interactive interface.

The Engine Room: Tools & Technology Stack

- ✓ Identified customer payment preferences and gaps.
- ✓ Supported data-backed pricing strategy decisions.
- ✓ Enabled rapid, data-driven revenue analysis.
- ✓ Assisted executive management with real-time KPI monitoring.
- ✓ Enhanced decision-making through an interactive interface.

fit, I would love to connect.

Pilot Competencies: Key Skills Demonstrated

Transforming Data:
Turning raw numbers
into insights.

Executive Design:
Crafting intuitive
dashboards.

KPI Creation:
Defining metrics
that matter.

Behavioral Analysis:
Understanding
customer habits.

Decision Support:
Backing strategy
with hard data.

Visual Storytelling:
Communicating
complex ideas
clearly.

Ready for the Next Journey

Actively seeking opportunities to apply analytical skills to solve real business problems and create measurable impact.
